

## Reinforcement

49

81

### Effects of Grout and Energy-Dissipating Bar Properties on a Type III Grouted Seismic Connection for Precast Concrete Structures 31

Theresa C. Aragon, Yahya C. Kurama, and Donald F. Meinheit

### Experimental Testing of Older AASHTO Type II Bridge Girders with Corrosion Damage at the Ends 49

Cameron D. Murray, Brittany N. Cranor, Royce W. Floyd, and Jin-Song Pei

### Global Experimental Response of a Three-Story, Full-Scale Precast Concrete Shear Wall Structure with Reinforcing Bars Spliced by Grouted Couplers 65

Wenlong Han, Zuozhou Zhao, and Jiaru Qian

### Pull-Out Behavior of Headed Anchors Used in a Totally Prefabricated Counterfort Retaining Wall System 81

Maen Farhat, Mohsen Issa, and Bruno F. J. Prado

## On the cover

Molin Concrete Products of Lino Lakes, Minn., and the University of Minnesota Duluth designed a precast concrete demonstration structure as a teaching tool. It includes plain gray shear wall panel with exposed reinforcement and a window blockout, among other features. Courtesy of Molin Concrete Products Co.

## ERRATA

In “Flange-to-Flange Double-Tee Connections Subjected to Vehicular Loading, Part 1: Numerical Assessment Approach” in the July–August 2018 issue of *PCI Journal*, Fig. 3 on page 44 should list 0.025 in. instead of 0.49 in.

For Fig. A13 in the online appendix for Flange-to-Flange Double-Tee Connections Subjected to Vehicular Loading, Part 1: Numerical Assessment Approach, the horizontal axis should read 1.0E-05 to 4.0E-05 in increments of 0.5E-05.

The revised figures are included with the Discussion on pages 99–104.
